

Autopilot for your music career. PLAIGROUND is a distribution and artist management platform where AI bots run an independent artist's career 24/7, with everything in one place, done the same way every time.

Bots run your career 24/7

Artists keep 100% of royalties

Free to join. Pay per tool or release.

Built and live today **WORKING PRODUCT**

- **Distribution to stores.** Submit a release and send it out.
- **Cover Art maker**, built right into submit.
- **Contracts hub.** Review, fix, or create contracts. Human and AI libraries.
- **Qualify my song.** Checks copyright, publishing, sync, and clean release.
- **Song Helper.** Plai interviews the artist like a co-writer: who the song is for, what it should do, the truth they want to pass on, then personal stories and sensory details. Their own answers become the lyrics, so they can save each draft and claim a record of their human authorship.
- **Submit page.** Drag, zoom, and reset your cover art.
- **E-signed split sheets** with your collaborators.
- **Copyright and publishing setup** per release. Human or AI-assisted, done right.
- **Claim my human parts.** A timestamped authorship record, with a PDF.
- **Earnings, payouts, and analytics.** Plus human, assisted, and AI labels on every song.

The route map. Every artist gets a path from idea to getting paid:

[Make it](#) > [Get ready](#) > [Protect it](#) > [Put it out](#) > [Get heard](#) > [Get paid](#) > [Run it](#)

What we think is different. We haven't seen anyone else put AI bots on an artist's whole career, 24/7. We also haven't seen another platform combine these in one place: distribution, signed split sheets, a contracts hub, copyright and publishing setup, a clean-release check, and a human authorship record. Every song can leave with a signed paper trail. That proof is what labels, sync buyers, and stores are starting to ask for.

Ongoing bot-run management **IN DEVELOPMENT: MONTHLY PLANS**

The next layer. Monthly plans where our bots keep running the work an artist's team would do.

- Persona build and posting schedule
- Content engine
- Release rollouts
- Fan growth
- Creator outreach
- Placement and sync pitching
- Business management: royalty and split checks, registrations, contract reminders, stolen-song watch
- Brand protection
- Weekly reports

Persona build gives every artist their own brand asset map. Monthly plans run the everyday, drop, and big-moment content for them.

Honest status **WHERE WE ARE**

No user numbers yet. We have no retention, conversion, or value-per-artist numbers to share. We won't guess them.

Still needs work: automated sync pitching, fraud prevention (fake streams, stolen songs), and automatic split payouts to each collaborator.

We bring a lot of value. Now we need to catch our audience, get them interacting, and learn what they respond to most. That's where we'd love your help.

Your framework, applied to us

From "How I Got Amazon Execs to GIVE ME MONEY." You said: "Start with the outputs." So we did.

P · Partner

Our goals: first releases, artists who come back for more tools, proof that autopilot works, and numbers an investor will trust.

L · Locate

We mapped the journey and listed the early actions we think matter. Now we need data to find which ones really do.

O · Outline

Once we know the lift, we build the case together: spend X, get back Y.

T · Tell

Autopilot for your music career: bots run it 24/7, in one place, with a signed paper trail for every song.

Our brand asset map (draft). You asked what our brand asset map looks like. Here's our first pass.

Phrases "Autopilot for your music career" · "Wanna plai?" · "Keep 100% of your royalties" · "Claim it"

Character Plai, our one face

Rituals "Claim my human parts," signing the split sheet, and the Song Helper interview

Look Black, purple, and gold, with our bubble logo

Themes Autopilot (bots run it 24/7), everything in one place, own your work with proof

Sound Not built yet. We'd love your help.

The artist journey (short version)

1. Hears about us: a TikTok creator, a friend, or a split sheet invite.
2. Visits wannaplai.com and signs up free.
3. First-time guide: "Where's your song?" and "What do you want?" builds their route.
4. Makes it, gets it ready, and protects it.
5. Puts it out: submits and pays for the release.
6. Goes live in stores, then gets paid.
7. Runs it: second release, more tools, invites collaborators. This is retention.

Proposed "retained": starts a second release, or pays in two different months, within 90 days. We want you to pressure-test this.

Our guesses for high-value actions

Hypotheses, not findings. Like your Facebook "7 friends in 10 days" example, we want to find ours.

- Signs a split sheet with a collaborator
- Qualifies a song
- Claims their human parts
- Sets up payouts
- Submits a first release in week one
- Uses Song Helper twice

How we'll measure. Tracking for every key action, signup source, and artist type is **being added now**, plus a cohort view of 7-day actions against 30-day retention.

Testing plan we want to build with you EARLY STAGE

Because we're early, we'd rather design good tests with you than guess. A few starting ideas:

Every test keeps the same look, voice, and Plai. We test the hook, not the identity, so each test builds on the last.

TEST	WHAT WE CHANGE	WHAT WE MEASURE	WHAT WE LEARN
Which free tool hooks first	Lead with Song Helper, Cover Art, Qualify my song, or Contracts review	Signups, then first release and return visits	Our best front door
Which message wins	"Keep 100% of your royalties" vs "Everything in one place" vs "Protect your song"	Click-through and signups per message	What artists care about most
Which artist type sticks	Compare human indie, AI-assisted, and producers	Week-one actions and 30-day retention by type	Who to go after first
Which creator format works	Each creator runs one recurring PLAIGROUND format with their own ref code.	Signups and first actions per ref code	Which content to scale

Where we'd love your help

You design the plan. We're open to your direction. Our goal is a launch built to go viral right away, with these tests running alongside it so we scale what works.

- Validate our journey and our retention definition.
- Design the TikTok-first micro-creator test.
- Shape the investor story once the first numbers come in.
- Pick 3 to 5 high-value actions and build the math with us.
- Pitch 3 original ideas to bring artists in, and run one with us.
- Leave a playbook our bots can keep running.

Our questions for you

- What can we realistically reach in 30, 90, and 180 days?
- How would you get us there?
- Can you lay out options from steady to aggressive (your best mode), with the cost and timeline for each?
- What should our signature ritual and sound be, the way "good job Larry" works for Larry June?
